
7.0 – MENU PLANNER

Use Case Description	The User selects Meal Planner, a subsection of My Program. They set some basic options, and are presented with pre-planned meals from the ██████████ system.
Actor(s)	• E-Member • E-Member (Corporate member)
Preconditions	None
Business Rules	<u>Planner Profile</u> 1. A User can edit their Menu Planner profile easily. 2. The type of plan (for User only or for the family) is found in the User's profile. 3. The type of special diet is found in the User's profile. 4. The points-per-day range is generated from the User's profile. 5. In the profile, a User can select the week's start day. That will always be in the first day of the week in the menu plan. 6. In the profile, the User can select how strictly they would like to follow their plan. <u>Planner</u> 7. A Menu Plan will come from the set of plans designed by ██████████. The plan details will be dependent on the information in Business Rules 2-4. 8. Users who want to follow the menu plan most strictly will see the Menu Planner load with all "add" checkboxes marked. 9. A User may have up to two plans active. A plan that is currently being used and one for the upcoming week. 10. A plan that has already been transferred to the journal may not be edited and sent back to the journal. (see miscellaneous issues) 11. A Weekly Menu Planner is broken down by days, then meals. Points per day and points per meal are listed. 12. Each meal will have a descriptive name, 13. Clicking on a meal will allow the User to change that meal. They can replace the meal with one from a system-generated list. 14. The User can add any meal to their favorites. 15. The User determines which meals are added to the journal by using checkboxes. The User can select or de-select a whole week. 16. A User can request another Menu Plan based on their current settings. The Menu Plan will be a one recently presented to the User. 17. The User can see a daily view of any weekday. From there they can make changes to any meal. 18. The User can print a weekly menu plan. <u>Shopping List</u> 1. The User is able to generate and print a shopping list from the meal plan. Because some plans and meals may have been added to the journal and others not, the list should come from only those meals that have been added. The resulting list can be printed. 2. Users are able to generate a shopping list for individual recipes or a menu plan.

	3. The shopping list should be broken down by food items, then recipes. 4. Where possible the shopping list should aggregate quantities. 5. Each food included in the shopping list should include the following: a. Item Name (Ground Chuck) b. Amount (1/2) c. Unit (cup, teaspoon, pound) d. Store Location (Butcher) e. Recipe Name requiring item (Bob's Meatloaf) 6. Based on quantities required by recipes, the shopping list should indicate how much of an item to purchase. 7. The System should list "food items" together. "Food Items" are individual foods not associated with a recipe. This functionality will be used only combine items that occur in similar units within the recipes (e.g. 2 cookies on Tuesday and 2 cookies on Wednesday will combine to result in 4 cookies in a weekly shopping list). 8. Recipe ingredients should be listed under the title of the recipe. These items will not be aggregated. 9. User may print out, email, or download shopping list for use while offline. 10. Shopping list should be organized by area of the store (i.e., fruit, dairy, butcher, vegetables, etc.).
Data	<u>Planner Profile</u> • Intentions for Meal Planner ○ Follow strictly ○ Follow but modify ○ Don't Follow • Type of meal plan ○ For me ○ For my family • Type of Diet ○ Vegetarian ○ High Protein ○ High Carb ○ No Special Diet • Starting Week Day ○ May be any day of the week (Sunday-Saturday) <u>Menu Planner</u> • Add to Journal ○ Checked Days • Go To Daily View ○ Dropdown of seven days of the week • View a Different Plan ○ Dropdown of recently created plans <u>Daily View</u> • Change Meal ○ Dropdown of meals matching point values of original meal • Go to Daily View ○ Dropdown of seven days of the week <u>Change Meal Popup</u> • Change Meal

	a. Dropdown of meals matching point values of original meal
Process Flow Narrative	<u>Meal Planner</u> 1. The User sees a full week's menu plan. It may be a new one or one they are already using. 2. The User can add the menu plan in whole or in part to their journal. They can choose the days to which they add these. 3. If the User decides to change a meal before adding it to the journal, they may. They can do this from a popup, or a daily view. 4. After making an addition, the system displays a confirmation message. 5. The User can add any meal to their favorites. 6. If the User is unhappy with the menu plan displayed, they can request a new one. 7. They User can print menu plans. <u>Shopping List</u> 8. The User can view a shopping list generated from all meals added during this session. 9. They may edit or print this list.
Exception Steps	• If any site or page is unavailable/offline, system will present error / apology message. • If no suitable meal plans are available, system present error / apology message. • If a meal is added to the journal where a meal already exists, the situation must be reported and the User should have the option to back out.
Non-Functional Requirements	██████████ should have the ability to add/manage the Menu Planner's set of Menu Plans.
Misc. other and/or Issue	A User cannot edit a Menu Plan once it has been added to the journal. They may, however, remove it, overwrite it with a new menu plan, or use the journal to edit the details of each menu.
Business Requirement Addressed	Business Requirements in Meal Planning document of 7/21 by Gilbert Midonnet; amended in meeting of 8/12 and 8/19.
Priority	A
